Play Console — Data safety answers (draft)

Derived from the code (geolocator, image_picker, mobile_scanner, url_launcher, http, azblob, flutter_secure_storage, Gupshup OTP, Azure AD token, Google Maps). Re-check each answer against the final privacy policy before submitting.

Top-level questions

Question	Answer
Does the app collect or share any required user data types?	Yes
Is all collected data encrypted in transit?	Yes (HTTPS; release build blocks cleartext)
Do you provide a way for users to request data deletion?	Yes — by email request (give the URL/email from the privacy policy)
Independent security review?	No

Data types

"Shared" below means transferred to a third party. Service providers acting only on your behalf (Azure hosting, Gupshup SMS) are **not** "sharing" under Play's definition, but Google Maps receives location for map rendering/navigation only if you consider it a transfer — confirm with Legal; the conservative choice is to declare it as shared for App functionality.

Category → Type	Collected	Shared	Optional?	Purpose
Location → Approximate location	Yes	No	Required	App functionality
Location → Precise location	Yes	No (see note)	Required	App functionality
Personal info → Name	Yes	No	Required	App functionality, account management
Personal info → Phone number	Yes	No	Required	App functionality, account management
Personal info → User IDs	Yes	No	Required	App functionality, account

Category → Type	Collected	Shared	Optional?	Purpose
				management
Personal info → Address	Yes (customer address on tickets)	No	Required	App functionality
Photos and videos → Photos	Yes	No	Required	App functionality
App activity → Other user-generated content / in-app actions	Yes (attempt records, audit log)	No	Required	App functionality
Phone/call data	Not a listed Play category — covered by **Personal info** → **Phone number** and **App activity** (call duration). State in the policy.			

Not collected: financial info, health, messages, contacts, audio/voice recordings, files & docs, calendar, web browsing, device/other IDs for ads, crash logs/diagnostics (no Crashlytics/analytics SDK in pubspec).

Data handling

- Data is processed ephemerally? **No** — records and photos are stored server-side.
- Users can request deletion: **Yes**.
- Committed to Play Families policy: **No** (not a child-directed app).

Permissions Declaration / sensitive permission notes

- `CALL_PHONE`, `READ_PHONE_STATE`: core feature = calling the customer from the Call Customer screen. Prepare the demo video (see reviewer-access.md).
- `ACCESS_FINE/COARSE_LOCATION`: foreground only; no background location.
- `CAMERA`: proof photos, QR scan.
