1. About the app

Asset Recovery is a business application for authorised field agents of Sun Mobility Private Limited and its partners. Agents use it to locate, verify and recover company-owned assets (such as batteries) from customers, and to record the outcome of each recovery attempt. It is not intended for the general public or for anyone under 18.

2. Information we collect

Information	Why we collect it
Agent mobile number and one-time password (OTP)	To sign you in and verify you are an authorised agent.
Agent profile (name, agent ID, role, assigned area)	To show your assigned tickets and attribute your actions.
Precise location (GPS)	To confirm you are at the customer or asset location (geo-fence check), to attach location to proof, and for navigation. Collected only while the app is open (foreground). Not collected in the background.
Photos taken in the app	To record proof of a recovery attempt. Photos may carry the location where they were taken.
Scanned QR / serial codes	To identify the asset being recovered.
Customer and asset details shown on tickets (name, phone number, address, asset serial, dues)	Supplied by Sun Mobility Private Limited; displayed so you can contact and visit the customer.
Call information (customer number dialled, call start time and duration)	To log that a customer call took place and for how long. The app does not record call audio.

Information	Why we collect it
Attempt records and audit log (ticket ID, outcome, notes, timestamps, screens used)	To keep an accountable history of each recovery attempt.
Device / app data held on the phone (session token, cached tickets, queued uploads, language)	To keep you signed in and let you work with poor connectivity. Stored on the device; the sign-in session is kept in encrypted storage.

We do not use advertising SDKs and do not sell personal information.

3. Permissions the app asks for

- **Location** — geo-fence verification, proof and navigation.
- **Camera** — proof photos and QR scanning.
- **Phone (call) and phone state** — to place the customer call from your SIM and measure its real duration. Without the phone-state permission calls still work and the app times them itself.
- **Internet / network state** — to talk to our servers and detect offline mode.

You can withdraw any permission in Android settings; some features will stop working.

4. Who we share information with

We share data only as needed to run the service, with:

- **Microsoft Azure** — hosts our APIs and stores uploaded proof photos.
- **Gupshup** — delivers the sign-in OTP SMS to your mobile number.
- **Google (Google Maps)** — displays maps and navigation.
- **Sun Mobility Private Limited and its authorised partners** — the organisation that employs or contracts you, for operational and compliance purposes.
- **Authorities**, where required by law.

Data is sent over HTTPS.

5. Retention

Recovery records, proof photos and audit logs are kept for as long as needed for the business purpose and legal obligations — [[RETENTION PERIOD, e.g. 7 years]] — and then deleted or anonymised. Data cached on your phone is removed when you sign out or uninstall the app.

6. Your rights and choices

Subject to applicable law (including India's Digital Personal Data Protection Act, 2023) you may ask to access, correct or erase your personal data, or withdraw consent, by contacting [[EMAIL]]. Because the app is provided through your employer or contracting organisation, some data must be retained for legal or contractual reasons. To request deletion of your account and associated data, email [[EMAIL]] from your registered mobile number / work email; we respond within [[30]] days.

7. Security

We use HTTPS, encrypted on-device storage for your session, and access controls on our servers. No system is perfectly secure; report suspected issues to [[EMAIL]].

8. Children

The app is for adults engaged in a business role. We do not knowingly collect data from anyone under 18.

9. Changes

We will post updates at this URL and update the effective date above.
